Draft your patent application to target a favorable tech center group to get the best quality patent in the shortest amount of time.

There is wide variability among examiner behaviors across the USPTO and surprisingly, even within tech center groups. The proof is now evident and easily available with the exclusive new Lottery Map™ metric available in LexisNexis Pathways™.

Pathways provides clear direction for success when drafting patent applications.

Pathways enables you to:

- Target and avoid specific tech center groups with customized drafting guidance.
- Leverage real life example applications in both desirable and undesirable tech center groups to tailor your application accordingly.
- Get the best patent in the shortest amount of time with exclusive insight on what tech center group you should be targeting.

Positively influence the likelihood and the time it takes to get your application approved.

Pathways accurately predicts the path your application is expected to take at the USPTO, and helps guide you toward the best technology center group by characterizing your invention in a way that will get you the best patent in the shortest time.
PathWays, a highly sophisticated best-in-class patent classification engine, offers insight and unique visualizations of the “character” of technology center groups to which your application is most likely to be assigned.

Lottery Map

This visual representation shows you the likelihood of being assigned to a specific type of examiner within that particular tech center group. Now, you can effectively target a tech center group where you are more likely to be assigned to a green examiner.

Target List & Avoid List

This feature provides guidance on ideas and themes around how you should frame your invention to either target or avoid a specific tech center group.
